

# Tour Planner

Protocol Intermediate Hand-In

**Daniel and Patrick Rohrweckh**

# UX-Design

We chose to divide the main window into three sub views. The first sub view on the left side of the main window is a list of the existing tours. The second sub view on the upper right side of the main window displays the details of a tour and an image of the route in three tabs that can be switched between. The third sub view on lower right side of the main window is a list of the tour logs of a tour. With the buttons above the first sub view the tours can be added, modified and deleted. Adding or modifying a selected tour opens a new window where the details can be defined or changed. With the buttons above the third sub view the tour logs of a selected tour can be added, modified and deleted. Adding or modifying a selected tour log opens a new window where the details can be defined or changed. Both sets of buttons can also be found under the Edit menu item. Under the menu and over the sub views the search bar can be found which can filter tours. Next to the search bar are two buttons one to search, the other to clear the search bar. The about button under the help menu item opens a dialog to display information about the program. The window can also be closed with the exit button under the file menu item.
